

Polyhex Technology Company Limited, set up in 2014 with a mission to reduce the cost and time spent to develop ARM architecture embedded devices, has become one of the most respected and fastest growing embedded systems solution providers. Our system-on-modules, embedded mother boards, fanless embedded computers, panel pcs and customized embedded devices, have enabled clients to create successful products, covering multimedia, transportation, IoT, automation, process control and more applications.

In the past few years, we have invested heavily in production capacity. Through our ISO9001:2015 / ISO13485:2016 certified factory, we provide our customers with the highest quality embedded products and customization services. We have 60K+ square feet manufacturing facility, and 16 full time R&D engineers. Newly expanded facilities offer up to 100K PCBA / month of sufficient capacity. We continuously invest in production technology, state-of-the-art equipment upgrades, and research and development so that all our products deliver the

benefits of the latest ARM architecture embedded technology.

Together with our world-wide Silicon Vendors, we deliver best-in-class Embedded Computing solutions. To deliver up-to-date technologies solutions to our clients, we extend our technology and business capability through a powerful alliance ecosystem of industry-leading companies and organizations. Together, we provide our customers the top-notch services to streamline their projects.
